Current score: - / 5 ; Threshold 4

The innovation aims at exploring new market opportunities addressing EU/global challenges *

-

Explanation

0 / 300 characters

The proposal provides a realistic description of the current stage of development and added value of its innovation as well as an understanding of the competing solutions. Includes good comparison with state-of-the-art, known commercial solutions, including costs, environmental benefits, gender dimension , ease-of-use and other features, or includes plans for achieving this information
Note:In relation to the project content, e.g. gendered studies, clinical trials, etc. *

Visbiežāk pieļautās kļūdas

- Pārāk daudz tehnisku un zinātnisku detaļu
- Fokuss uz jomu, nevis konkrēto inovāciju
- Komandā nav komercializācijas prasmju
- Pārāk tieša pieturēšanās pie formas
- Zemas ambīcijas

The energy input for the 3.75 MW KJ2-3G w/GO system is about 14.1 MMBTU/hr Lower Heating Value (LHV). For example, if the waste gas has 16% methane content (calorific value of 100 BTU/scf) then the flow rate of waste gas required to produce 3.75 MW of continuous power is 2,270 scfm. However, if the gas has a methane content of 20% then it only requires 1,915 scfm. These figures assume standard ambient temperature and pressure.

- Aizrašanās ar Part 4 (kompānijas aprakstu)
- Rieteikuma pārkraušana, padarot to nelasāmu
- Slikta angļu valoda

Labā pieteikuma sastāvdaļas

- Skaidrs inovācijas un tās attīstības stadijas apraksts
- Pierādījumi, ka patērētājiem tas būs vērtīgi (value for money)
- Tirgus apraksts un ambicioza ienākumu prognoze
- Fokusēta komerciāla stratēģija
- Paskaidrojums, kā tas ir svarīgi Eiropai
- Salīdzinājums ar konkurentiem (gan jomas, gan tehnoloģijas)
- Intelektuālā īpašuma aizsardzība
- Komanda ar tehnisku un starptautisku komercializācijas pieredzi
- Pietiekami detalizēts darbu plāns
