General Information

Short summary

An Austrian start-up is looking for a supplier of a kind of energy ball making machine within Europe. The company produces different kinds of vegan energy balls and therefore seeks a machine for the automation of this process.

Full description

The Austrian start-up is looking for a machine which should extrude and cut the prepared vegan mixture (a combination of dates and nuts) into equal parts of 10 grams. Then the machine should form the equal parts into balls. For that purpose, it could also be connected to a second machine.

In the end, the outcome should be perfectly shaped energy balls by using the hand-mixed mass of dates and nuts, which weighs 10 grams/piece. The formulation is sticky and not too dry.

So far, these balls have been made by hand, which is a time-consuming task and the reason why the client now wants to automate this process by finding a supplier of a suitable machine.

The client is looking for a European company that sells these kinds of machines.

Advantages and innovations

By using an automated machine the client could save time

Stage of development

Already on the market
