General Information

Short summary

A Turkish Gaming Equipment Company has developed an Analog Gaming Keyboard that can detect keystroke pressure to give better controls to users. Analog keyboards can replace user input devices like joystick, d-pad and steering wheels by adjusting in-game response according to pressure applied on keyboard keys.

Company looking for partners to produce the keyboard under outsourcing agreement.

Full description

The Turkish Company works on different embedded systems and software development has developed a gaming keyboard that is able to detect keystroke pressure and distance with specialized electronics and software that can offer analog control like gamepad controllers. Company aims to offer a new gaming experience that combines the advantages of keyboard and other gaming controllers without the need of external devices. Software of keyboards allows a high level of personalization and backwards compatibility to games that have analog controls. With a wide variety of uses in different game genres and ability to keep mouse control while having advantages of other analog controls during game play Analog gaming keyboard also offers competitive advantages to players. It also allows gamers to experience analog gaming mechanics in games that otherwise would not be experienced with a regular keyboard and mouse gameplay.

Company is looking for parties that would be interested in production under outsourcing agreement.

Advantages and innovations

- Tested and can be used in games or office use.
- Participated the biggest electronic fair CES2023 Las Vegas(Consumer Electronic Show) received a lot of positive feedback.
- Offers 4 different user mods.
- Prevents users from buying extra gaming equipment like gamepads or gaming wheels.
- Compatible with normal keyboard cases(Only needs a different circuit board).
- Fully customizable computer UI.

Technical specification or expertise sought

Company is looking for an experienced partner in gaming, electrical or plastic industries.
