General Information

Short summary

A German SME offers an all-in-one waste management and recycling platform that supports companies with large and complex waste streams to increase recycling rates and to reduce costs. Commercial agreements with technical assistance are offered to companies from retail, manufacturing, construction, healthcare and logistics within the Euro area member countries.

Full description

To reduce our economies raw material consumption as well as the carbon emissions related to them, turning waste into resource streams through efficient recycling is a key strategy. An SME from the North of Germany offers an all-in-one waste management and recycling platform, helping numerous industries to address sustainability targets, solve their day-to-day efficiency and cost challenges, as well as empowering them with the tools they need to steer their organisation towards a zero-waste future.

Having one integrated platform for all locations, recyclers and waste streams enables companies with large and complex waste streams to control, manage and recycle more. The digital solution covers all relevant processes, from recycling-containers contract and pickup management, through invoicing and payments to reporting obligations and hazardous waste management documentation. The company already cooperates with a large client base on German market involving businesses and corporates from retail, manufacturing, construction, healthcare and logistics.

Following features are included:

- Operations: All-in-one platform reduces time-consuming administrative burden.
- Accounting: Create and send invoices, get a complete overview of costs and revenues related to waste and recycling.
- Reporting: Full transparency about volume and costs, provides data needed for reporting purposes and to create an optimisation strategy.
- Optimisation: Automated, digital workflows make recycling more efficient and transparent
- Legal: Easy contract management

Commercial agreements with technical assistance are offered to companies with large and complex waste streams. Companies should be located/operating within Euro-zone. Expressions of interest are especially welcome from retail, manufacturing, construction, healthcare and logistics as these are the current sectors of operation. Nevertheless the SME is constantly interested to improve it's offer and curious to learn about the waste management and recycling challenges from other sectors.

Advantages and innovations

- Achieve zero waste
- Recycle more
- Reduce costs
- Centralise processes

Secret know-how

Partner Sought

Expected role of the partner

Partners sought are bigger companies with large and/or complex waste streams as these will benefit most of the solution. The SME already has a larger client base in retail, manufacturing, construction, healthcare and logistics and would like to address these sectors also for further growth within the EU Single Market. Partners should have a sincere interest to improve their sustainability and to explore opportunities to steer their company towards a zero-waste future.
